

Heeej bird lover,

With this Cactus you have the unique combination of a birdhouse and bird feeder.

You can hang this unique Cactus in two ways, but keep in mind that the birdhouse entrance has a wall thickness of 3 mm and the opening of the bird feeder with the wooden ring has a thickness of 20 mm. For that reason we enclosed 3 screw-hooks in different lengths.

### **Use it as A birdhouse (hang it on the wooden ring)**

- For hanging the Cactus on a fence, you need a screw-hook that extends 20 mm or slightly more. Use the enclosed the hook of 3,2 x 40 mm.
- For attaching it to the wall or tree, use the plug and a hook of 4,6 x 60 mm.
- If you want to hang the Cactus as a birdhouse on a tree, make sure it is a thick tree. The back side should be 'closed' as much as possible to prevent rain, wind and dirt to come inside.

### **Use it as a bird feeder (hang it on the small opening)**

- For hanging the Cactus on a fence or tree, you let the screw-hook stick out 3 mm or slightly more. In that case, use the one of 2 x 20 mm.
- For attaching it to a tree, use the 3 x 40 mm hook. To a wall the hook of 4,6 x 60 mm further in, as the wall plug of 6 x 50 mm is long enough for that.
- Fill it with for example with mixed bird seeds or a fat ball (without net).

We wish you and the birds lots of pleasure with this Cactus birdhouse & bird feeder.

Team Heeej!
